## The M4 is the semiautomatic shotgun

with Benelli patent self-cleaning auto-regulating gas system with rotating locking head. The high-tech nature of its design and development is thanks to Benelli's experience in the design of semiautomatic shotguns.

18,5" TELESCOPIC STOCK

14"+ DOOR-BREACHER TELESCOPIC STOCK

# m4

# STATE OF ART

## A.R.G.O. system

The M4 has an ingenious, cutting-edge, gas operated mechanical system, patented by Benelli and known as Auto Regulating Gas Operating (A.R.G.O.).

## The M4 was selected by the US armed forces

as its Joint Service Combat Shotgun, after passing all of the stringent acceptance tests for efficiency, reliability, ballistic precision and strength in the worst possible conditions. The M4 is also available with telescopic stock that can be adjusted in 5 positions.

## Compact and multipurpose

The M4 model with short magazine tube (3 magnum or 4 standard cartridges + 1 in the chamber) and 14" (355 mm), barrel is a compact weapon that has been devised for use in more restricted environments.

18,5" TELESCOPIC STOCK

14"+ DOOR-BREACHER TELESCOPIC STOCK

## CERAKOTE treatment

### External Ceramic coating

(federal standard field grab) that confers the treated surfaces of the M4 exceptional resistance against extreme environmental conditions, erosion, corrosion and scratching.

## Versatile and reliable

The versatility of the m4 shotgun can also be seen in its interchangeable stocks: telescopic, fixed stock or pistol grip stock, in technopolymer reinforced with fibre-glass, replaceable without tools. The choice of tubular magazine is fundamental since it allows the continual reloading of cartridges without having to loosen grip or move from a firing position: the weapon is thus always loaded and ready to fire and there are no breaks in defensive cover.

All models have a limited number of parts, which have been assembled in such a way as to allow quick and easy stripping and re-assembly without tools.

A soldier in tactical gear, including a helmet and goggles, is aiming an M3 submachine gun. The soldier is wearing black gloves and a tactical vest. The background is dark and out of focus, suggesting a combat environment. The M3 gun is a dual-mode weapon, capable of both semiautomatic and pump action firing. The overall tone is serious and professional.

**m3**

FLEXIBLE AND MULTIPURPOSE

## M3 is a dual mode (semiautomatic and pump action)

M3 is one of the best possible choice for any operational or defense requirement. This is thanks to its flexible use (lethal and less than lethal ammos), easy handling, precision and high firing volume.

18,5" TELESCOPIC STOCK

# m2

# PRACTICAL AND RELIABLE

## Inertia Driven System

The Inertial System mechanism, the rigorous design and essential construction guarantee constant functioning without blocking as well as precision, easy handling, fast firing action, and simple use.

## The tactical version

The Tactical version is equipped as standard with Ghost Ring Sights that are both windage-and elevation-adjustable.

It can also be fitted with an MIL-STD-1913 Picatinny Rail, making it possible to fit all types of targeting device (from optical sights to red dot sights, light intensifiers and thermal chambers) as well as An/Pvs-4 night vision sights.

A Benelli Nova handgun is shown from a low angle, held by a hand wearing a tactical glove. The background is dark and industrial, with various mechanical parts and a bright light source on the right side. The Benelli logo is visible on the slide of the handgun.

**nova**

STURDY AND RESISTANT

## Nova has the mag stop system

The mag-stop system, which is an exclusive Benelli patent, means that using an easily accessible button, it is possible to extract the chambered shell without disturbing the ammunition in the magazine. Nova can use all the ammos available on the market.

18,5" MONOBLOCK STOCK/RECEIVER

14"+ DOOR-BREACHER MONOBLOCK STOCK/RECEIVER

The high rubber recoil pad is pressure applied and requires no fastening screws.

A mag-stop button located under the fore-end means that it is possible to extract the chambered cartridge without removing the cartridges in the magazine.

Nova consists of a minimum number of parts, which means that maintenance operations are both quick and simple. The fore-end cap, with its highly ergonomic design, is the only tool required to strip the weapon.

- The shotguns have single action trigger system and 2 kg trigger load.
- The safety is right/left reversible, ordinary (mechanic and manually operated on the trigger) and automatic (against premature firing on disconnecter).
- Finish: hammered barrel in Ni - Cr - Mo; blued exterior and chrome-plated interior.
- Sights: Sight and Ghost Ring Rear Sight; Slug fixed sight and adjustable rear sight.
- Magazine Capacity: 4 standard, 3 magnum, 2 supermagnum (+ 1 in the chamber).

## Technopolymer reinforcements

The one-piece stock and receiver is made in sturdy, injection-moulded technopolymer with glass fibre reinforcements. Nova is impervious to humidity, abrasion and shocks, and it can even withstand the effects of solvents and chemical products.

## Ghost Sight & Rail

The Tactical version with 18.5" (470 mm) cylindrical barrel is fitted as standard with Ghost Ring Sight and MIL- STD 1913 Picatinny Rail for mounting all types of targeting device and An/Pvs-4 night vision sights.

A Benelli Supernova pump-action shotgun is shown in a dark, moody setting. The shotgun is the central focus, with its pump handle and barrel visible. The Benelli logo is clearly visible on the receiver. The background is dark and textured, possibly a wall or a piece of fabric, with some light reflecting off the surfaces.

**supernova**

CUTTING AGE TECHNOLOGY

## From 2005 the new pump-action

Conceived and designed in 2005 by the Benelli Armi's Research and development Centre, the SuperNova Pump-Action collection is the most modern product of the entire world panorama of smooth barrel, pump-action shotguns.

- The shotguns have single action trigger system and 2 kg trigger load.
- The safety is right/left reversible, ordinary (mechanic and manually operated on the trigger) and automatic (against premature firing on disconnect).
- Finish: hammered barrel in Ni - Cr - Mo; blued exterior and chrome-plated interior front and rear.
- Sights: ghost ring sight.
- Magazine Capacity 18,5": 6 standard, 5 magnum or 4 supermagnum (+1 in the chamber).

## Telescopic stock

Thanks to extensive technological experience and the precision engineering used to develop it, SuperNova represents the ultimate in the sector.

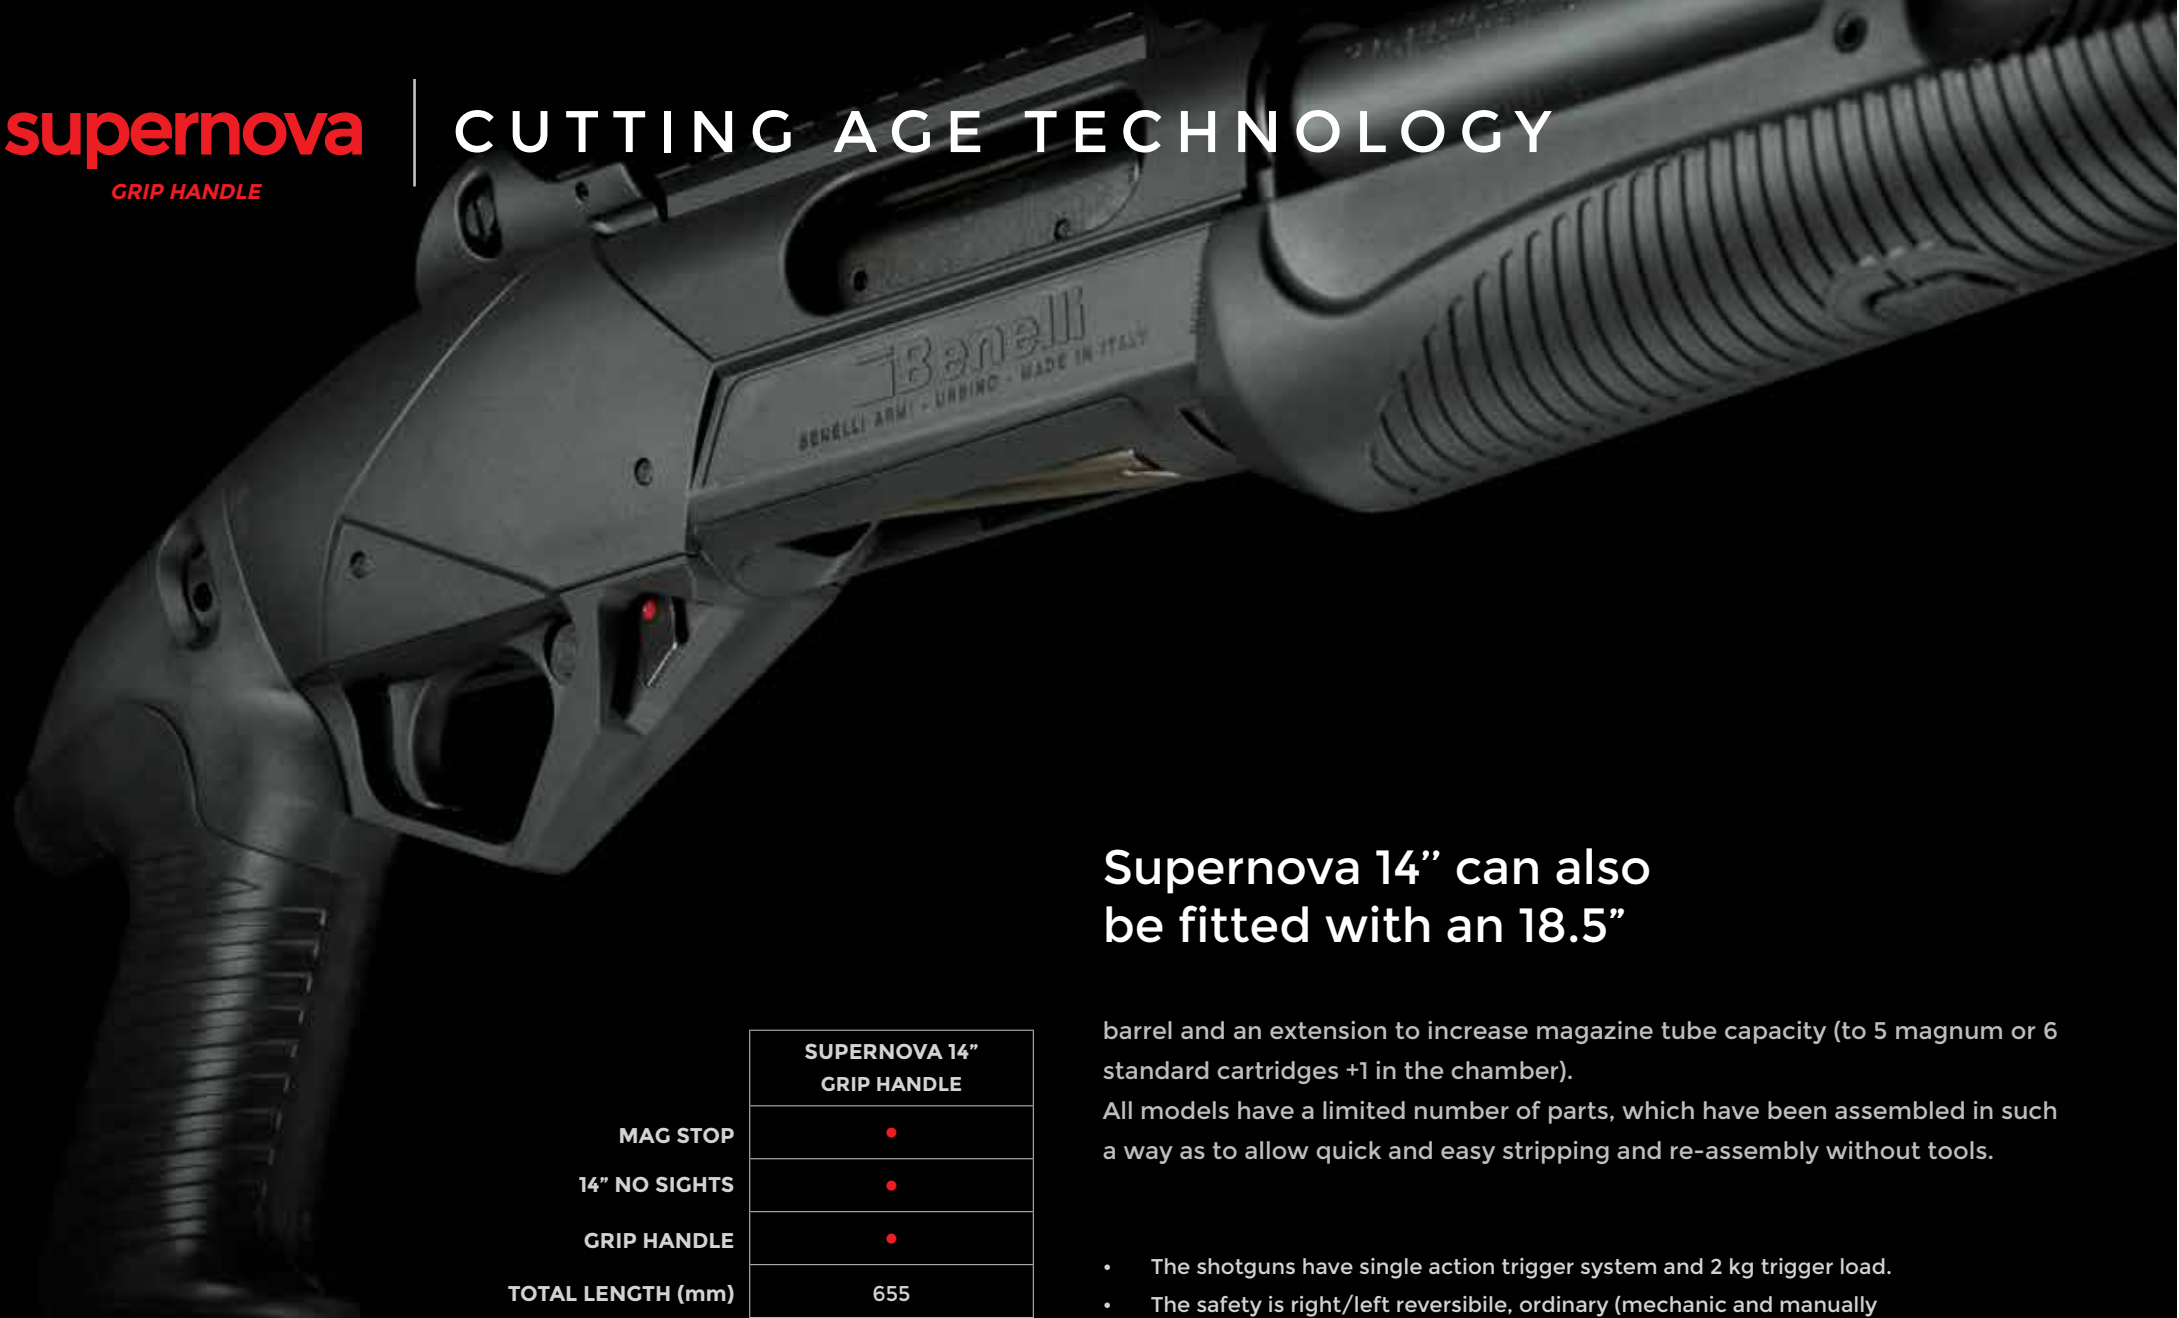

In the version with Telescopic Stock, it is a powerful shotgun, versatile and resistant however and wherever it is used.

## New design details

The new design of this weapon incorporates important and exclusive details in terms of ergonomics.

The stock can be quickly adjusted in 5 positions without tools. It can be adjusted from a maximum length of 1020 mm to a minimum of 910 mm, while maintaining all of the shotgun functions, even in the shortened version.

## Supernova 14" can also be fitted with an 18.5"

barrel and an extension to increase magazine tube capacity (to 5 magnum or 6 standard cartridges +1 in the chamber).

All models have a limited number of parts, which have been assembled in such a way as to allow quick and easy stripping and re-assembly without tools.

- The shotguns have single action trigger system and 2 kg trigger load.
- The safety is right/left reversible, ordinary (mechanic and manually operated on the trigger) and automatic (against premature firing on disconnect).
- Finish: hammered barrel in Ni - Cr - Mo; blued exterior and chrome-plated interior.
- Magazine Capacity: 4 standard, 3 magnum, 2 supermagnum (+ 1 in the chamber).

14" + DOOR-BREACHER GRIP HANDLE

## Reliable and resistant

The MR1 semiautomatic rifle is chambered in 5.56 mm (.223 Rem.) and uses the proven A.R.G.O. system developed by Benelli for the M1014.

All steel parts are black phosphated and aluminium parts are hard-anodized in a matt finish.

The MR1 is the first self loading semiautomatic rifle conceived from the ground up for police work; more versatile than a military firearm, it can be adjusted to the physical attributes and the special needs of the single operator.

12,5"+2" TELESCOPIC STOCK

**MRI**

DURABLE AND PRECISE

## The frame of the MR1

is divided in 2 parts: top receiver and bottom receiver. The bottom receiver is milled from a solid bar stock of aircraft grade light alloy; for maximum strength, the top receiver (permanently affixed to the barrel) is machined from a bar of high quality hardened steel.

## Flexible and versatile

Ambidextrous magazine release button and bolt release lever allow the use of MR1 rifle also by left-handed shooters. Manual safety button can be assembled on either side of the firearm.

A quick detachable sling swivel system on front and both sides of the stock make all the combinations of carrying the rifle possible. Large slots on stock and fore-end allow the passage of traditional slings.
